

## STEP ZERO: CETOPO ARCHICAD PLUGIN

Download and install this from the 'Manage' tab on the Cetopo website.

## STEP ONE: THE SELECTION

First, you need to select the area around your site that you want to download.

## STEP TWO: THE DOWNLOAD

Download a file using the 'Archicad Detail' template. You will find this in the CAD folder at the bottom of the page.

## STEP THREE: YOUR MODEL IN ARCHICAD

With the Cetopo plugin, you can select your file to import. You should select 'Import location from CTP file'.

## STEP FOUR: USING YOUR MODEL

It's very easy to manipulate models in Archicad, you can easily remove buildings you would demolish, by selecting and deleting them. You can then import models for your design, or use your topography model as a base to begin designing from!
